

HTP Series – Push Pull Hydraulic Lift Tables

500 to 2000 lb capacities

The HTP series was developed specifically as a heavy-duty die handling table with all of the key benefits of the HT series, along with a mechanism to easily push and pull dies from a press or storage rack. Key features include low maintenance, extremely stable, high level of mobility, and an ergonomic design. Several sizes and options are available to suit any customer’s material handling requirements.

The HTP series is engineered with ergonomics in mind. The high capacity hydraulic jack allows the operator to quickly and easily adjust the height of the table with a high level of precision. This allows the operator to load/unload dies between presses or storage racks at different loading levels with less effort. The push pull mechanism and rollers also ease the operation of loading/unloading dies. A foot operated floor lock quickly anchors the table to the floor and die pins are used to captivate the die to safely transport them between locations.

Their rugged construction consists of steel plate and a welded web frame. The top is guided by extremely rigid guide tubes. These tables are designed to last for decades with very little maintenance in the most demanding environments.

Size and Capacity

Model No.	Capacity	Length	Width	Lift Range			Casters		Guide Tubes	Floor Locks	Shipping Weight
				Low	High	Lift	Swivel	Rigid			
HTP-500-FR	500 lb	30"	20"	34"	52"	18"	2	2	2	1	265
